

Extremely durable and long lasting composite panels

Mobi-Deck™ panels are durable and strong composite panels designed to enhance the mobility of pedestrian, wheelchairs and vehicles over unstable grounds. They provide an extremely firm surfacing over soft flat sand, gravel, mud, etc.

ADA /ABA/AODA compliant

Mobi-Deck™ panels are 5ft x 6ft long. They are installed at beach entrance to provide a 5ft or 6ft wide ADA/ABA access for wheelchair users and people with mobility issues.

Efficient ground protection

Mobi-Deck™ panels provide access and efficient ground protection when used over wet and soft grounds, great traction for medium wheeled vehicles and also protects your turf. Mobi-Deck can handle up to 80 tons.

Multi-purpose reversible surfacing grip design on both sides

Mobi-Deck™ panels' tread pattern surfacing design brings:

- on one side, a pedestrian/wheelchair friendly non-slip ADA/ABA/AODA access surfacing
- on the reverse side, a corrugated surfacing that provides traction to wheeled vehicle in sand and prevents "spin out" in wet or slippery conditions like landscaping projects and construction sites.

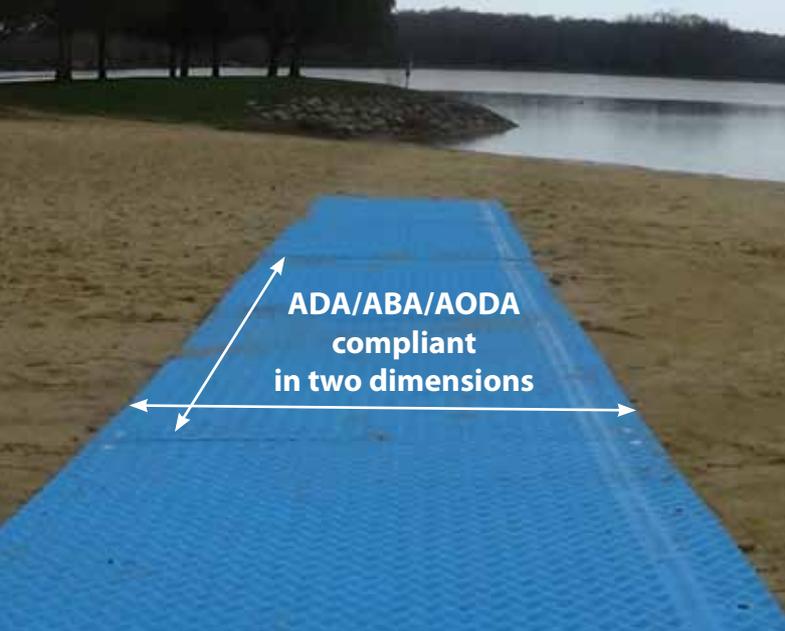

Durable & Recyclable Panels

Mobi-Deck panels are made of 100% recyclable HDPE plastic are UV and weather resistant and can be used over and over again.

HDPE panels are widely accepted at recycling centers, recycling a plastic is much more cost-efficient than creating it from scratch and new products can be developed from recycled HDPE plastics and recycling reduces their cost.

Environmentally-friendly panels

Mobi-Deck panels are environmentally friendly and sustainable products. They are resilient to absorbing liquids and contaminate, easily washed and certified clean.

Easy installation, maintenance, dismantling, transport & storage

Mobi-Deck® panels are delivered on standard pallets with connectors bags and are easily handled with standard lifting equipment. The panels can be connected in a variety of configurations: use the 4 connections holes, one at each corner and 4 additional connection holes (2 each at the center of the 6' side) for easy connection of panels in either direction. Of course, Mobi-Deck can also be used without any connectors on most temporary projects and may be placed adjacent to one another for quick installation.
